

CYBERSECURITY & 24/7 SOC

Someone is in your network at 3 a.m. Who is watching?

CNS runs a 24/7, US-based Security Operations Center that watches your endpoints, identities, servers and network, separates real threats from noise and escalates with a plan. Built on SentinelOne, where we are a direct partner.

TOOLS RAISE ALERTS. PEOPLE STOP ATTACKS.

01

Alerts nobody reads

EDR and firewalls produce alerts all day. Without analysts behind them, the one that matters sits in a queue.

02

Nights and weekends

Attackers pick the hours your team is asleep. Monitoring that stops at 6 p.m. covers the quiet part of the day.

03

Too many vendors

Endpoint, logging, network and backup from four providers means four phone calls in the middle of an incident.

Put analysts behind your alerts.

What our security operations cover

A monitoring and response program scoped to your systems, with escalation paths and severity handling written down before day one.

24/7 Security Operations Center

Round-the-clock alert monitoring, triage and documented escalation by security analysts.

EDR and XDR on SentinelOne

Endpoint protection and correlated detection. As a direct SentinelOne partner we license, deploy and tune it ourselves.

SIEM and Syslog

Critical security events centralized for visibility, correlation and later investigation.

Vulnerability management

We find weaknesses and rank the fixes by operational risk, not by list length.

Response coordination

Containment and escalation workflows agreed in advance and matched to your systems.

Security reporting

Operational reports and evidence for management reviews and audit preparation.

ONE ACCOUNTABLE TEAM FOR THE WHOLE JOB

We protect it

SentinelOne licensing direct, deployment and 24/7 monitoring.

We host it

Rented compute, enterprise HPE storage and managed virtual desktops.

We monitor it

SOC and NOC coverage with forensic log retention behind it.

We recover it

Doomsday Backup, off-site replication and tested restores.

HOW WE WORK

01

Assess

A review of your current security posture and tools.

02

Onboard

We connect event sources, deploy agents and tune policy.

03

Monitor

24/7 triage and escalation under agreed severity levels.

04

Report

Regular reporting, playbook reviews and steady improvement.

Talk to a security engineer.

Tell us what you run and what worries you. We will scope coverage, response commitments and a written quote.
